

JALON 2 SAÉ 2.4 Projet intégratif

Capture Packet Tracer, indiquant l'ensemble des services disponibles

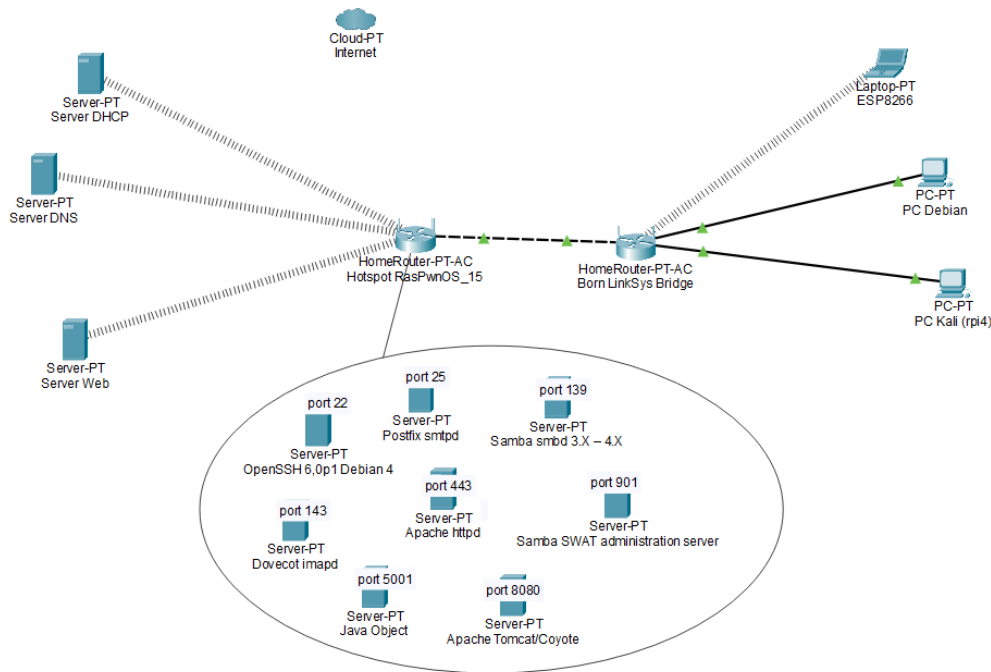

Tableau avec l'ensemble des services et des versions des différentes applications :

Services	Port	Version
ssh	22	OpenSSH 6,0p1 Debian 4+deb7u2 (protocol 2.0)
smtp	25	Postfix smtpd
Netbois-ssn	139	Samba smb3 3.X – 4.X (workgroup : WORKGROUP)
imap	143	Dovecot imapd
http	443	Apache httpd 2.2.22
Netbois-ssn	445	Samba smb3 3.X – 4.X (workgroup : WORKGROUP)
smtp	587	Postfix smtpd
http	901	Samba SWAT administration server
issl/imap	993	Dovecot imapd
Java-object	5001	Java Object Serialization
http	8080	Apache Tomcat/Coyote JSP engine 1.1

Vérification fonctionnelle du fichier mon_systeme.txt

```
root@kali-raspberrypi: ~
# cat mon_systeme.txt
hello from esp8266 and binome 15 + mac : 2C:3A:E8:42:12:CF !
```

```
root@kali-raspberrypi: ~
# cat mon_system1.txt

<h2>Welcome to the RasPwn OS Web Playground</h2>
<p>Welcome to the <a href="http://raspwn.org/">RasPwn OS</a> web playground.
The RasPwn OS Web Playground is a collection of hackable versions of popular web applications <!-- replaced by
--></p>
<h2>Introduction</h2>
<p>The RasPwn OS Playground contains vulnerable web applications for pen-testers
and hackers to practice and play with. These are divided into two categories:</p>

The top-left screenshot shows the 'RasPwn Web Playground' homepage, which has a dark theme and a large title. The top-right screenshot shows a dark, mostly empty web page, likely another server's homepage. The bottom-left screenshot shows the 'WackoPicko.com' homepage, which has a light blue and white theme and includes a login form and a search bar.</div>
```

Dans le cadre du second jalon du projet de cybersécurité, une analyse approfondie des services actifs a été menée sur un environnement simulé utilisant Packet Tracer et RasPwn OS. L'objectif était de détecter les services en écoute, d'identifier leurs versions, et de tester les vulnérabilités exposées via différentes interfaces web.

Ce jalon a permis :

- D'établir la cartographie des services actifs sur le réseau simulé.
- De vérifier la présence d'interfaces vulnérables accessibles via le web.
- De valider le bon fonctionnement de la communication entre les équipements (ESP8266, Kali, serveurs...).

Cette étape constitue une base solide pour l'audit de sécurité à venir.
